(Day 2)

Vectors: Components and Work

Vector Components : Let u and v be non-zero vectors and

$u = w_1 + w_2$, where w_1 and w_2 are orthogonal and w_1 is parallel to v .

w_1 is called the force parallel or the projection of u onto v .

w_2 is called the force normal or the force perpendicular.

*) Draw the the projection of u onto v and the force perpendicular (w_1 and w_2) in the appropriate position at the right. Label the diagram appropriately.

Find the projection of u onto v and the vector component of u orthogonal to v .

*1) $u = \langle 5, 1 \rangle$
 $v = \langle 3, 6 \rangle$

1) draw Force Parallel \vec{w}_1
 2) draw Force Normal \vec{w}_2

3) Find angle of w_1 , (θ) or \vec{v}

$\theta = \tan^{-1}(\frac{6}{3})$
 Quad I : 63.43°

4) Find angle between \vec{u} and \vec{v}

$\theta = \cos^{-1} \left(\frac{\vec{u} \cdot \vec{v}}{\|\vec{u}\| \|\vec{v}\|} \right) = \cos^{-1} \left(\frac{5 \cdot 3 + 1 \cdot 6}{\sqrt{26} \sqrt{45}} \right) = 52.125^\circ$

5) Find angle of \vec{w}_2 (Normal)

$63.43^\circ - 90^\circ = -26.57^\circ$ or 333.43°

6) Find $\|\vec{w}_1\|$

$\cos 52.125^\circ = \frac{\|\vec{w}_1\|}{\sqrt{26}}$
 $3.130 = \|\vec{w}_1\|$

7) Find $\|\vec{w}_2\|$

$\sin 52.125^\circ = \frac{\|\vec{w}_2\|}{\sqrt{26}}$
 $4.025 = \|\vec{w}_2\|$

8) $\text{Proj}_{\vec{v}} \vec{u} = \vec{w}_1 = 3.130 (\vec{i} \cos 63.43^\circ + \vec{j} \sin 63.43^\circ) = \langle 1.400, 2.799 \rangle$

9) Force Normal = $\vec{w}_2 = 4.025 (\vec{i} \cos 333.43^\circ + \vec{j} \sin 333.43^\circ)$

$= \langle 3.600, -1.800 \rangle$
