

# Algebra I

1-2

Order, Absolute Value, Opposites

Real Numbers - All the numbers that you know about

A number line with arrows at both ends. It is labeled with tick marks at -3, 0, 1, π, and 7. Above the line, the region between -3 and 0 is labeled "negative #", and the region between 0 and 7 is labeled "positive #". To the left of -3, it says "# get smaller", and to the right of 7, it says "# get larger".

Real Numbers can be broken down into:

Whole number -  $\{0, 1, 2, \dots\}$

Integers -  $\{\dots, -2, -1, 0, 1, 2, \dots\}$

Symbols of Inequality (Order) -

$>$  Greater than       $\geq$  Greater than or equal to  
 $<$  Less than         $\leq$  Less than or equal to  
 $\neq$  Not equal

$$8 \geq 8$$

True

$$8 \geq 7$$

True

Write a number to represent each situation. (pg 33)

Then write the opposite of that situation and write a number to represent it.

1) Five steps down :  $-5$

Five steps up :  $5$

Translate each statement into symbols.

15) Six is greater than negative nine.

$$6 > -9$$

State two inequalities, one with  $>$  and one with  $<$ , for the coordinates of the points shown in color.

$$\begin{aligned} -1 &< 3 \\ \text{or} \\ 3 &> -1 \end{aligned}$$

Complete using one of the symbols  $<$  or  $>$  to make a true statement.

41)  $6 \underline{\quad} 5 + 4$

$$6 < 9$$

Graph the given numbers on a number line. Draw a separate line for each exercise. ~~Then list the numbers in increasing order.~~

47) 1, 2, -2, -1

Opposite - negative

$$\text{opposite of } 6 = -6$$

Absolute Value - Makes its argument not negative.

$$|3| = 3$$

$$|-2| = 2$$

$$|0| = 0$$

Simplify. (pg 38)

$$7) 6 + [-(-2)]$$

$$6 + 2$$
$$8$$

$$15) |-0.7| + |-3.3|$$

$$0.7 + 3.3$$
$$4$$

Solve each equation over the set of real numbers. If there is no solution, explain why there is none.

$$*) |x| = 7$$

$$\rightarrow \text{or } 7$$

$$*) |x| = -5$$

no  
solution

Evaluate each expression if  $a = 1.5$ ,  $b = -2$ , and  $c = -1.7$

$$39) |a| + |b|$$

$$|1.5| + |-2|$$

$$1.5 + 2$$

$$3.5$$

Assignment:

The Classic 1-8

2-54 every 4th (2,6,10, etc)

The Classic 1-9

2-44 even
